

Developing ASP.NET MVC 4 Web Applications

20486B

Delivery Type: Classroom

Duration: 5 days

Overview:

In this course, students will learn to develop advanced ASP.NET MVC applications using .NET Framework 4.5 tools and technologies. The focus will be on coding activities that enhance the performance and scalability of the Web site application. ASP.NET MVC will be introduced and compared with Web Forms so that students know when each should/could be used. This course will also prepare the student for exam 70-486.

Audience Profile:

This course is intended for professional web developers who use Microsoft Visual Studio in an individual-based or team-based, small-sized to large development

environment. Candidates for this course are interested in developing advanced web applications and want to manage the rendered HTML comprehensively. They want to create websites that separate the user interface, data access, and application logic.

Course Completion:

After completing this course, students will be able to:

- ✓ Describe the Microsoft Web Technologies stack and select an appropriate technology to use to develop any given application.
- ✓ Design the architecture and implementation of a web application that will meet a set of functional requirements, user interface requirements, and address business models.

- ✓ Create MVC Models and write code that implements business logic within Model methods, properties, and events.
- ✓ Add Controllers to an MVC Application to manage user interaction, update models, and select and return Views.
- ✓ Create Views in an MVC application that display and edit data and interact with Models and Controllers.
- ✓ Run unit tests and debugging tools against a web application in Visual Studio 2012 and configure an application for troubleshooting.
- ✓ Develop a web application that uses the ASP.NET routing engine to present friendly URLs and a logical navigation hierarchy to users.
- ✓ Implement a consistent look and feel, including corporate branding, across an entire MVC web application.
- ✓ Use partial page updates and caching to reduce the network bandwidth used by an application and accelerate responses to user requests.
- ✓ Write JavaScript code that runs on the client-side and utilizes the jQuery script library to optimize the responsiveness of an MVC web application.
- ✓ Implement a complete membership system in an MVC 4 web application.
- ✓ Build an MVC application that resists malicious attacks and persists information about users and preferences.
- ✓ Describe how to write a Windows Azure web service and call it from an MVC application.
- ✓ Describe what a Web API is and why developers might add a Web API to an application.
- ✓ Modify the way browser requests are handled by an MVC application.
- ✓ Describe how to package and deploy an ASP.NET MVC 4 web application from a development computer to a web server for staging or production.

Prerequisites:

- ✓ A minimum of two to three years of experience developing web-based applications by using Microsoft Visual Studio and Microsoft ASP.NET, proficiency in using the .NET Framework, and some familiarity with the C# language.
