APS Servicing HP BladeSystem
192738

Delivery Type: Classroom
Duration: 2 days

Overview

Servicing HP BladeSystem v10.31 is a comprehensive course that delivers the technical information necessary to successfully troubleshoot HP server blades and other HP BladeSystem components like interconnect modules, partner blades, or enclosures. The participants can expect to gain a technical understanding of HP BladeSystem infrastructure including building blocks like enclosures, server blades, and interconnect modules.

This training also covers important service procedures for HP BladeSystem like firmware update or restoring lost password and configuration backup/restore process.

This training is designed to help service specialists understand troubleshooting methods and tools used for HP BladeSystem.

Target Audience

This course is suitable for Services Specialists.

Objectives

✓ Using Onboard Administrator.
✓ Removing and Replacing Parts.
✓ Downloading and Uploading Configuration Files.
✓ Using iLO Management Processor.
