Avaya Aura® System Manager Implementation, Administration, Maintenance, and Troubleshooting
5U00095

Duration: 2 days

Overview

In this course, you will learn essential System Manager administrative tasks that are common to all adopting products.

This course is also available as part of the combined Boot Camp Avaya Aura Session and System Manager Implementation, Administration, Maintenance, and Troubleshooting (5U00097). This course updates and replaces System Manager Administration (5U00080).

Please note that System Manager topics covered in this course are foundational System Manager Administrative tasks that are general to all adopting products. The course does not focus on specific tasks relating to individual adopting products such as Communication Manager or Communication Server 1000.

Pre-Requisites

Attendees should meet the following prerequisites:
- ✓ Avaya Aura System Manager Overview (5U00106W)
- ✓ Avaya Aura Session Manager Overview (5U00105W)

Objectives

Upon completion of this course, participants should be able to:
- ✓ Prepare the installation environment, install System Manager and validate successful install
- ✓ Set up and administer System Manager user groups and user accounts
- ✓ Configure System Manager for business continuity, including high availability, back up, and restoration of system data
- ✓ Exploit system discovery in the network
- ✓ Manage and deploy licenses
- ✓ Use bulk import and export facility

Target Audience

This course is for those responsible for installing, configuring, administering, and maintaining Avaya Aura System Manager

Certification

This course helps you prepare for the ACSS Avaya Aura® Session Manager and System Manager Implementation and Maintenance Exam (3102). For more information, please visit www.dada.bg/certification
