

# Agile Project Management Practitioner

## APMAP4

**Delivery Type:** Classroom

**Duration:** 4 days

### Overview

This training course is a stable-mate to PRINCE2, ITIL and Managing Successful Programmes, with accreditation and certification by the APMG to both Foundation and Practitioner levels.

Agile approaches such as eXtreme Programming, Scrum and Lean Software Development are becoming increasingly mainstream. They describe how to successfully deliver in complex situations when requirements and possible solutions are subject to continuous change; but they stop short of describing a full project lifecycle with defined Phases, Work Products, Roles and Responsibilities. This course covers how to operate in such an Agile fashion within an overall project framework which is accredited as a stable-mate to PRINCE2 and based on the DSDM Altern approach. Through practical experience of the Agile style of working, case studies and example scenarios from a highly experienced trainer, it provides delegates with an understanding of how the Agile Project Management process can enable planning, management and control for predictable Agile project deliveries.

### Objectives

- ✓ Understand the fundamentals of Agile Project Management
- ✓ Fully describe and relate the Agile Project Management process
- ✓ Understand the key Agile Project Management practices and how to manage Agile Project teams
- ✓ Understand project control in the Agile environment

### Target Audience

The course is aimed at Project Managers and others involved in Project Management who want to understand how to apply Agile approaches within an overall project management lifecycle framework

### Certification

- ✓ Certified Agile Project Management Foundation Certificate
- ✓ Certified Agile Project Management Practitioner Certificate
