CCNA Mentored Workshop

CCNAWS

Delivery Type: Classroom
Duration: 2 days

Overview

Your chosen self study / e-learning route, be that Global Knowledge Self Paced, Cisco PEC or other, provides a valid learning alternative however, used independently, it does have several drawbacks:

1) How do I practice this knowledge on real equipment?
2) Who do I ask if I don't understand something?
3) How can I convert the theory in to real world application?

Well, now you can have the best of both worlds with the Global Knowledge CCNA Network workshops

This programme provides the missing pieces. It consists of a two day long mentored session, in which you bring your theoretical knowledge and put it into practice. We will provide you with real equipment to compliment your virtual study. Some suggested labs to get you started and a fully qualified Cisco CCSI who will be with you every step of the way to help, support and provide advice.

There is no formal lecture, but what you can do is take the opportunity to ask the instructor anything, fill in those gaps in your knowledge and then put it to the test live on your own pod of Cisco equipment.

You are in control, you only need to cover the information you want to. So if you can't cover it all in two days then you can always come back for another - you decide!

When you are not with us, we will still be here to help you. With this programme you also have exclusive access to CCNA Extra. This web based portal not only contains additional preparation material but importantly the ability to interact with us. Post your questions and we will provide the answers plus the guidance to get you ready to be a real CCNA

You owe it to yourself to have the right real world skills to be able to wear the CCNA badge with pride and differentiate yourself from the paper CCNA's.

Pre-Requisites

Delegates are expected to have completed an approved ICND1, ICND2, CCNA self study package and or have attended the relevant instructor led training programme.
