

Agile Project Management Certification Workshop

GK2401

Delivery Type: Classroom

Duration: 4 days

Overview

Prepare for PMI-ACP certification while learning to lead Agile software projects that adapt to change, drive innovation, and deliver on-time business value.

Agile has made its way into the mainstream. Today, more organizations and companies are adopting the Agile approach over a more traditional waterfall methodology, and more are working every day to make the transition. It's increasingly important that project management professionals demonstrate true leadership in today's software projects.

This course will prepare you to lead your next Agile project and helps you prepare for the Project Management Institute Agile Certified Practitioner (PMI-ACP) certification exam. Achieving PMI-ACP certification clearly illustrates to your colleagues, organizations, and potential employers that you're ready and able to lead in this new age of product development, management, and delivery. Acquiring PMI-ACP certification now will make you one of the first software professionals to achieve this valuable industry designation from PMI.

This class is a stimulating combination of class

interaction, active learning exercises, and group collaboration. Each exercise is designed to allow you to learn through practice so that you will be able to immediately apply what you have learned in your work.

Pre-Requisites

You should be familiar with the role of Agile in your organization; no advance preparation is required.

Objectives

- ✓ Enormous gains available by empowering Agile teams
- ✓ Knowledge areas required for the PMI-ACP exam
- ✓ Reaching a common understanding of your customer and your customer's needs
- ✓ Use an Agile approach to effectively manage a project's schedule, scope, budget, quality, and team
- ✓ Tangible, effective methods of team-based planning
- ✓ Creating transparent communication among and with customers
- ✓ Tips and techniques for project managers to inspire the team to better performance
- ✓ Prioritizing methods that will help the team build trust with customers

- ✓ Connecting all five levels of planning to create cadence for the team
- ✓ Establishing a roadmap for what you want to apply to your team and how success with Agile can be achieved

Certification

- ✓ To earn PMI-ACP certification, you must pass the PMI-ACP exam and meet the PMI eligibility requirements for Agile project and project team professional hours.

Target Audience

Intermediate-level professionals who need to improve their Agile project management skills and want to earn PMI-ACP certification and anyone who is considering using an Agile methodology for software development, including project managers, analysts, developers, programmers, testers, IT managers/directors, software engineers, software architects, software managers, testing managers, team leaders, and customers.
