EMC Networker Installation, Configuration, and Administration
GK4435

Delivery Type: Classroom
Duration: 5 days

Overview

Get an introduction to EMC NetWorker installation, configuration, maintenance, management, backup, and recovery.

This course explores EMC NetWorker installation, configuration, maintenance, management, backup, and recovery. The course contains lectures, instructor demonstrations, and hands-on labs to provide practice in both UNIX and Windows environments.

Objectives

- ✓ Install NetWorker and NetWorker Management Console
- ✓ Use NetWorker resources and administrative interfaces
- ✓ Perform backups
- ✓ Customize backups
- ✓ Configure and manage standalone devices
- ✓ Configure and manage libraries
- ✓ Manage NetWorker databases
- ✓ Manage NetWorker media
- ✓ Administer the NetWorker server
- ✓ Perform cloning and staging of save sets
- ✓ Administer the NetWorker Management Console server and generate reports
- ✓ Perform recoveries of client data
- ✓ How to back up and recover in VSS and cluster environments

Target Audience

System administrators, partners, and software support specialists who install, configure, and support EMC NetWorker in Windows and Linux environments.

Certification

This course is part of the following programs or tracks:
- ✓ Storage Administrator (EMCSA) Specialist - Backup and Recovery – NetWorker
