

Cisco Advanced Mobility Workshop - Cisco Unified Access Solution

GKAMWCUAS

Delivery Type: Classroom

Duration: 3 days

Overview

This course is a 3 days Instructor Led training focusing on Cisco's Unified Access solution, which gives IT the platform they need to harness today's cloud and bring-your-own-device (BYOD) business transformation and innovation. Cisco Unified Access provides a comprehensive end-to-end solution to address customer top of mind issues. With new levels of visibility, control, and flexibility, Cisco Unified Access helps IT create the right solution for the right experience, and the right total cost of ownership (TCO). This course looks at the requirements for the vWLC, the Cisco Identity Service Engine and the Mobility Service Engine.

Cisco Prime Infrastructure is the glue that will bring wireless and wired technology under one roof. Participants will also have the opportunity to understand the importance of Cisco site surveying design and planning.

Target Audience

Engineers involved in the deployment of a Unified Access Solution using Cisco's Identity Service Engine and Prime Infrastructure Management Solution.

Pre-Requisites

Attendees should meet the following prerequisites:

- ✓ CCNA and CCNP Wireless Certification recommended or equivalent knowledge

Certification

Recommended preparation for exam(s):

There is no exam currently aligned to this course
