

HP-UX Performance and Tuning

U4262S

Delivery Type: Classroom

Duration: 5 days

Overview

This course introduces you to the monitoring and tuning of system and network sub-systems. Extensive hands-on labs allow you to gain experience using performance monitoring tools, such as glance, puma, prof and gprof to define, analyse, and tune the performance of HP-UX systems and common network services.

Pre-Requisites

- ✓ HP-UX System and Network Administration I H3064S
- ✓ HP-UX System and Network Administration II H3065S

Objectives

- ✓ Effectively utilize the range of performance tools that are available to you.
- ✓ Optimize your systems by identifying and removing performance bottlenecks.

- ✓ Deliver a guaranteed level of application performance to your end users.
- ✓ Learn how to regularly monitor your systems and quickly recognize problems.
- ✓ Effectively allocate resources (such as CPU, memory, disk I/O bandwidth) among your critical and lower priority users and applications.

Target Audience

This course is suitable for experienced UNIX System and Network Administrators.
