

HP-UX Differences for Experienced UNIX System Administrators

HK5875S

Delivery Type: Classroom

Duration: 5 days

Overview

This fast-paced intensive course is designed for experienced Tru64, AIX, Solaris, Linux, or other UNIX® administrators who need to understand the differences between HP-UX and standard UNIX. It is essential that students have existing UNIX system administration experience. The 5-day course is 50 percent lecture and 50 percent hands-on labs using HP.

Pre-Requisites

- Existing knowledge and system administration experience of a version of UNIX.

Objectives

- ✓ Configure and manage disk devices via LVM.
- ✓ Configure network connectivity and services.
- ✓ Shutdown, boot, reboot and recover HP-UX.
- ✓ Configure and manage HP-UX peripherals and device files.
- ✓ Configure and manage JFS file systems.

- ✓ Configure kernel drivers, subsystems, and tunable parameters.
- ✓ Install HP-UX OS software, applications, and patches.

Target Audience

This course is suitable for experienced UNIX System Administrators who are new to HP-UX systems.

Certification

Become an HP-UX Certified System Administrator (CSA) by successfully completing the HP0-A01 (previously HP0-095) HP-UX CSA certification exam.

Follow on Courses

- ✓ Hands-On with Logical Volume Manager. H6285S
- ✓ HP-UX VERITAS Volume Manager. HB505S
