HP-UX Systems Insight Manager HP-UX
HK712S

Delivery Type: Classroom
Duration: 4 days

Overview
This course covers the installation, configuration and use of HP Systems Insight Manager (SIM) on an HP-UX Central Management Server. HP SIM provides the management features of device discovery and identification, single event view, inventory data collection and reporting. This course focuses on the HP-UX environment and is 60% lecture and 40% hands-on labs using HP servers.

Pre-Requisites
- ✓ Experience in HP-UX administration.
- ✓ Familiarity with network concepts and configuration.

Objectives
- ✓ Install and configure HP SIM on HP-UX.
- ✓ Manage tasks and user authorisation.
- ✓ Troubleshoot HP SIM.
- ✓ Learn how to automate events and tasks to reduce manual processes and free resources for innovation.
- ✓ Describe the components and tools of HP SIM.
- ✓ Discover and monitor managed systems.

- ✓ Manage the HP SIM server and create reports.
- ✓ Monitor power utilisation.
- ✓ Monitor and manage multiple systems from a single location and improve the utilisation of your server environment by knowing how to quickly move computer power where it is needed.
- ✓ Create consistent reports on managed systems to enable faster and more efficient decisions.

Target Audience
This course is targeted for customers using HP Systems Insight Manager to manage Integrity servers and blades.
