

UC on UCS v1.0

UCUCS

Delivery Type: Classroom

Duration: 3 days

Overview

The UC On UCS course is designed for UC engineers who are responsible for migrating current UC environments onto UCS Cisco server based technologies running VMware ESXi. Unlike traditional server based installations, Cisco UCS servers can be configured through the UCS Manager (UCSM) using Service Profiles. An overview of the UCS products will be provided in the training, with emphasis on the advantages the UCS Manager brings to server provisioning. UC on UCS specific considerations will be discussed, including minimum requirements, caveats, and recommendations.

Pre-Requisites

Attendees should meet some prerequisites:

- ✓ Working knowledge of fundamental terms and concepts of computer networking including LANs.
- ✓ Fundamental knowledge of Cisco UC products

Target Audience

UC Engineers working on implementation or migration of a UC solution to a UCS server based environment.

Objectives

After completing this program, you will be able to:

- ✓ Describe UC on UCS solution and redundancy options
- ✓ Describe UCS (C and B series) hardware and software components that are necessary to deploy UC applications
- ✓ Describe the VMware requirements to deploy UC on UCS
- ✓ Describe VMware High availability with UC solution
- ✓ Understand TRC and specifications based VMware solutions
- ✓ Install UC application on UCS
