

VMware vCenter Operations Manager: Analyze & Predict

VMOMAP

Delivery Type: Classroom

Duration: 2 days

Overview

This course, for experienced VMware vSphere® personnel, teaches skills for the use of VMware® vCenter™ Operations Manager™ as a forensic and predictive tool. The course is based on VMware vSphere® ESXi™ 5.0, VMware® vCenter™ Server 5.0, and vCenter Operations Manager 5.0.

Pre-Requisites

- ✓ Hands-on experience administering vSphere 5 deployments
- ✓ Completion of VMware vSphere: Install, Configure, Manage [V5] recommended

Objectives

By the end of the course, you should be able to do the following:

- ✓ Understand major and minor badges and their underlying metrics.
- ✓ Use these badges to find root causes of common operational issues in a vSphere environment.
- ✓ Perform capacity management and what-if analyses.
- ✓ Use the Operations tab, the Planning tab, the Alerts tab, the Analysis tab, and the Reports tab.
- ✓ Navigate the vCenter Operations Manager 5.0 user interface.
- ✓ Use heat maps and create a custom heat map.
- ✓ Use smart alerts to detect system issues.

Target Audience

Experienced system administrators and system integrators
