IBM Initiate Technical Boot Camp v10
ZZ101G

Delivery Type: Classroom
Duration: 5 days

Overview

The Technical Boot Camp will prepare an implementation team member for the types of tasks that they would be expected to perform on their first project. The Boot Camp is not focused on the Marketing or End-User side of the IBM Initiate Master Data Service platform, but rather on the behind-the-scenes processes that take place in a typical implementation.

This course replaces course Initiate Technical Boot Camp (ZZ100GB). This is the Classroom version of Instructor-led Online course Initiate Technical Boot Camp V10 - ILO (3Z101GB).

Pre-Requisites

You should have reviewed the general product overview materials available on www.ibm.com prior to class.

Objectives

✓ Install and navigate Workbench
✓ Learn to create an Initiate member model
✓ Work with a data extract and CloverETL graphs
